HONOURING THE PAST,
WE DESIGN THE FUTURE.

COMPANY OVERVIEW

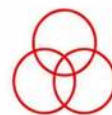

WE DESIGN GROUP operates across architecture, engineering and geology through a coordinated multi-disciplinary model. We develop buildable solutions for heritage assets, buildings, infrastructure and complex sites, aligning design quality, technical reliability, cost and programme from the outset.

CORE PURPOSE

We protect what matters, strengthen what already exists and create new value through design. Every project begins with a clear understanding of its context, its technical constraints and its long-term potential. Our purpose is to develop solutions that are safe, resilient and responsible, while improving the quality, performance and identity of buildings, infrastructure and places.

METHOD

We begin by reading the site, the structure and the wider context before defining the design strategy. Architecture, engineering and geology are coordinated from the earliest stages, allowing critical interfaces, risks and opportunities to be identified in advance. This integrated method supports clearer decisions, reduces unnecessary complexity and turns specialist knowledge into coherent, buildable solutions.

DELIVERY

From feasibility studies and concept design to permitting, detailed design, construction support and completion, we maintain continuity throughout the entire project process. We coordinate disciplines, information, costs, programme and technical responsibilities with a strong focus on quality and constructability. The result is a controlled delivery process designed to reduce uncertainty, support the client and achieve reliable outcomes on site.

VISION/ MANIFESTO

WE PROTECT
THE VALUE
OF THE PAST
TO DESIGN
A BETTER
FUTURE.

We believe progress begins with understanding what already exists. Every place carries knowledge, constraints and possibilities. Our role is not simply to preserve the past or replace it, but to reveal its potential, creating spaces that respond to today and remain meaningful tomorrow.

ROOTED IN LE MARCHE

The heart of Italy

Rooted in a land of craftsmanship, heritage and Made in Italy excellence, our group translates these values into contemporary projects. Precision, material knowledge and attention to detail define the way we design.

AGGREGATE
VALUE OF
WORKS

Different perspectives, one shared standard.

WE DESIGN GROUP turns specialist knowledge into clear decisions, coordinated action and projects conceived to perform over time.

PEOPLE

Expertise becomes stronger when it is shared. Our teams combine experience, curiosity and practical judgement, creating an environment where ideas are tested, refined and carried forward together.

LONG-TERM VALUE

We design beyond immediate completion. Resilience, adaptability, maintainability and responsible use of resources guide our choices, ensuring that each project continues to perform, serve its purpose and generate value over time.

COORDINATION

A successful project depends on the quality of its connections. We align disciplines, information and responsibilities from the earliest stages, resolving interfaces before they become delays, conflicts or additional costs on site.

RIGOUR

Every decision is grounded in evidence, technical standards and a precise understanding of context. We question assumptions, verify details and address risks early, turning complexity into reliable, buildable and measurable solutions.

AREAS OF EXPERTISE

Our expertise is organised around the real interfaces of a project: place and heritage, structure and soil, infrastructure and environment, cost and delivery.

14/24

ARCHITECTURE & CULTURAL HERITAGE RESTORATION

Contemporary design, conservation and adaptive reuse for places where identity, safety and new functions must coexist.

STRUCTURAL & SEISMIC ENGINEERING

Assessment, design and strengthening of new and existing structures, from complex buildings to seismic retrofit.

INFRASTRUCTURE, HYDRAULICS & GEOTECHNICS

Roads, bridges, networks, foundations and ground-related works developed through coordinated civil, hydraulic and geotechnical expertise.

PROJECT MANAGEMENT, BIM & TECHNICAL ADVISORY

Coordination of information, cost, programme, permits and construction interfaces from the first study to project delivery.

ENVIRONMENT, TERRITORY & RESILIENCE

Solutions for water, slopes, environmental systems and vulnerable territories, designed to reduce risk and improve long-term performance.

ENTIRE
COMMUNITIES

OUR SERVICES

One project logic, across every phase.

18/24

- 01 ARCHITECTURE & HERITAGE CONSERVATION
- 02 STRUCTURAL & SEISMIC ENGINEERING
- 03 TRANSPORT, ROADS & HYDRAULIC INFRASTRUCTURE
- 04 GEOLOGY, GEOTECHNICS & SLOPE STABILISATION
- 05 ENVIRONMENTAL & TERRITORIAL ENGINEERING
- 06 BIM MANAGEMENT & DIGITAL TWIN SOLUTIONS
- 07 PROJECT, COST & CONSTRUCTION MANAGEMENT
- 08 SUSTAINABLE DESIGN
- 09 HEALTH, SAFETY & PERMITTING ADVISORY
- 10 TECHNICAL-ECONOMIC FEASIBILITY & BUSINESS PLANNING

CERTIFIED MANAGEMENT SYSTEMS

—

Certified management systems support consistent project delivery, environmental responsibility, occupational safety and inclusive organisational practices.
